HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Makuch on 10/29/2009.

The application has been amended as follows:

2. The Abstract now reads as follows:

Disclosed is an improved transfer mechanism that transfers, in a vertical heat treatment system, process objects W between a container (carrier), and a holder (boat) holding plural process objects at vertical intervals. The transfer mechanism includes plural substrate support devices spaced at intervals, and each of the substrate support devices has a gripping mechanism for gripping a process object on the under side. The gripping mechanism includes a fixed engagement member on a distal end of the substrate support device, and a movable engagement member movably attached to a proximal end of the substrate support device.

3. Claim 6 now reads as follows:

A method of transferring process objects comprising:
providing a vertical heat treatment system including:

a heat treatment furnace having a furnace throat in a lower part thereof;

Art Unit: 3652

a lid that hermetically closes the furnace throat;

a holder, provided on the lid, that holds a plurality of process objects at vertical intervals via ring-shaped support plates;

an elevating mechanism that moves the lid vertically to load and unload the holder into and from the heat treatment furnace; and

a transfer mechanism that transfers process objects between the holder and a container holding therein a plurality of process objects at intervals, the transfer mechanism including:

a plurality of substrate support devices spaced at intervals, each substrate support device having front and rear seats fixedly provided on a lower surface of the substrate support device for respectively receiving front and rear edge portions of an upper surface of a process object, the front seat having an inclined surface directed obliquely downward and the rear seat having an inclined surface directed obliquely downward; and

gripping mechanisms configured to grip a process object on an under side of an associated one of the substrate support devices, each of the gripping mechanisms having a fixed engagement member fixedly provided on a distal end of its associated substrate support device to engage with a front edge portion of a process object, and a movable engagement member movably attached to a proximal end of its associated substrate support device to be disengageably engaged with a rear edge portion of the process object, the fixed engagement member

Art Unit: 3652

having an inclined surface directed obliquely upward to support a front edge portion of a lower surface of the process object, and the movable engagement member having an inclined surface directed obliquely upward to support a rear edge portion of the lower surface of the process object, whereby

an angle of inclination of the inclined surface of the front seat with respect to a horizontal plane is smaller than an angle of inclination of the inclined surface of the fixed engagement member with respect to said horizontal plane,

an angle of inclination of the inclined surface of the rear seat with respect to said horizontal plane is smaller than an angle of inclination of the inclined surface of the movable engagement member with respect to said horizontal plane,

placing each of the substrate support devices above a respective process object that is positioned in a transfer start position;

moving the movable engagement the fixed engagement member to grip the process object, so that the front edge portion of the process object is held by the inclined surface of the front seat and the inclined surface of the fixed engagement member, while the rear edge portion of the process object is held by the inclined surface of the rear seat and the inclined surface of the movable engagement member, so that a gap is formed between a lower surface of the associated substrate support device and an upper surface of the process object;

Art Unit: 3652

moving the substrate support device that is gripping the process object to a position above a transfer target position; and
moving the movable engagement member away from the fixed engagement member to release the process object whereby the process object is mounted on the transfer target position.

4. The following is an examiner's statement of reasons for allowance:
5. The allowable subject matter is found in at least the independent claims 1 and 6. The subject matter found to be allowable over the prior art, is the specific geometry of the moveable engagement member in combination with the rest of the claimed system. This geometry is not disclosed, or fairly suggested, by the closest prior art Iwai Seiji (JP 2003-338531).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOSHUA I. RUDAWITZ whose telephone number is (571)272-7856. The examiner can normally be reached on Monday - Friday, 7:30 A.M. - 5:00 P.M..
